## Revision History

Revision Number	Description	Date
1	Issued test report	February 6, 2015

**This report in its entirety, including appendices contains 56 pages.**

## Statement Qualifications and Limitations

This report was prepared by Aercoustics Engineering Limited in accordance with International Standard IEC 61400-11 (Edition 2.0, released 2002 and amendment 1, released 2006-05), "Wind turbine generator systems – Part 11: Acoustic noise measurement techniques". This report is specific only to the Wind Turbine identified in this report.

Aercoustics Engineering Limited shall not be responsible for any events or circumstances that may have occurred since the date on which the Wind Turbine was tested and/or this report was prepared, or for any inaccuracies contained in information that was provided to Aercoustics Engineering Limited. Further, Aercoustics Engineering Limited agrees that this report represents test data analysed as per the above described standard for the specific Wind Turbine described in this report, but Aercoustics Engineering Limited makes no other representations with respect to this report or any part thereof.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Aercoustics Engineering Limited accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Any use of this report is subject to this Statement of Qualifications and Limitations. Any damages arising from improper use of this report or parts thereof shall be borne by the party making such use.

This Statement of Qualifications and Limitations is attached to and forms part of this report.

# 1 Introduction

Aercoustics Engineering Limited (Aercoustics) was retained by Varna Wind LP (“Varna”) to conduct an acoustic measurement of turbine T31 at the Bluewater Wind Farm located in Bluewater, ON. The purpose of the measurement was to provide verification of the maximum noise emission of the turbine. The measurement was carried out in accordance with International Standard IEC 61400-11 (Edition 2.0, released 2002 and amendment 1, released 2006-05), “Wind turbine generator systems – Part 11: Acoustic noise measurement techniques”. This report is specific only to Turbine T31.

# 2 Wind Turbine Information

## 2.1 Wind turbine equipment specific information

Wind turbine specific equipment information for turbine T31 was provided by Varna Wind LP and is summarized in Tables 1 – 5.

Table 1 - Wind Turbine Details

Wind Turbine Details	
Manufacturer	GE
Model Number	1.X 100m
Turbine ID	T-31

Table 2 - Operating Details

Operating Details	
Vertical or Horizontal axis wind turbine	HAWT
Upwind or downwind rotor	Upwind
Hub height	82m
Horizontal distance from rotor centre to tower axis	
Diameter of rotor	100m
Tower type (lattice or tube)	Tube
Passive stall, active stall, or pitch controlled turbine	Pitch Controlled
Constant or variable speed	Variable
Power curve	See Figure B.01
Rotational speed at each integer standardised wind speed	See Figure B.02
Rated power output	1.6MW
Control software version	V04.07.02C build 2

Table 3 - Rotor Details

Rotor Details	
Rotor control devices	Electric
Presence of vortex generators, stall strips, serrated trailing edges	Vortex generators, Serrated trailing edge
Blade type	TPI
Serial number	D21907-101-03521-W860, D21907-101-03522-W860, D21907-101-03520-W860
Number of blades	3

Table 4 - Gearbox Details

Gearbox Details	
Manufacturer	Nanjing
Model number	FDMD
Serial number	FDMD-2063

Table 5 - Generator Details

Generator Details	
Manufacturer	GE
Model number	WTG-1304-072
Serial number	1-6-HEAD-30336-P

## 2.2 Wind Turbine Location

Turbine T31 is located in the municipality of Bluewater, approximately 540m East of Blind Line, and 1200m South of Kippen Road. The area surrounding T31 is flat and consists primarily of farmland.

A general layout of the area in which the turbine is located is provided in the site plan (Figure A.01).

### 3 Measurement Details

#### 3.1 Measurement Equipment

##### 3.1.1 Acoustic Measurement Equipment

A summary of acoustic equipment utilized by Aercoustics for the measurement of turbine T31 is summarized in Table 6.

Table 6 - Acoustic Measurement Equipment

Equipment	Manufacturer Name & Model	Serial Number
Acoustic Data acquisition system	LMS SCADA Mobile	5310922
Microphone	B&K 4189	2622169
Pre-amplifier	B&K 2671	2614900
Acoustic calibrator	B&K 4231	2513184

Calibration of the measurement setup was carried out before and after Aercoustics set of measurements.

##### 3.1.2 Meteorological Equipment

Wind speed for Turbine ON was derived from the power curve (as per procedures outlined in IEC 61400-11). Wind direction for turbine ON measurements was utilized from the nacelle anemometer located at hub height (80m high) from turbine T31. Data for background measurements was obtained from a 10m high anemometer, which was placed as per guidelines outlined in IEC-61400-11.

The meteorological equipment is summarized in Table 7

Table 7 – Meteorological Measurement Equipment

Equipment	Manufacturer Name & Model	Serial Number
Anemometer	VAISALA WXT520	K242001
Serial to Analog Converter	NOKEVAL 7470	A165152

#### 3.2 Measurement Setup

##### 3.2.1 Microphone Placement

The measurement microphone was setup 130m from the base of the turbine in 'Position 1', (i.e. downwind of the turbine, as per IEC 61400-11) at an elevation of 0m relative to the base of T31. The microphone was placed in the centre of a circular, acoustically reflective board.

During the measurement period only data points for which the microphone was within 15 degrees of downwind from the turbine were used. The microphone position relative to downwind of the turbine was monitoring via the yaw angle output provided from the

turbine system (discussed further in Section 3.5). During placement of the microphone the turbine was parked and the reference yaw angle for that measurement logged.

There were no nearby reflecting surfaces (houses, barns etc.); as such the influence from reflecting surfaces was considered to be negligible.

Photos of the measurement setup are provided in Figure A.02, Appendix A.

### 3.2.2 Double Windscreen Setup

A double windscreen setup was not utilized.

### 3.3 Measurement Schedule

Table 8 provides a summary of the test date and times. Data was logged in 1 minute intervals for post-processing (as per the measurement standard).

Table 8 - Measurement Schedule Summary

Date	Test Type	Start Time	Finish time
December 3, 2014	Turbine ON	10:47 am	11:47 pm
	Background	11:54 am	12:55 pm
	Background	12:59 pm	1:15 pm
December 8, 2014	Background	1:48 pm	3:38 pm
	Background	3:42 pm	4:23 pm

### 3.4 Meteorological Conditions

Detailed meteorological data relevant to the measurement is provided in Appendix E.

As previously mentioned, wind speed for Turbine ON was derived from T31's power curve (as per the standard), while wind direction was provided by T31's nacelle anemometer (located at hub height). Background data was obtained from an anemometer located 10m above ground level near T31.

Temperature and pressure readings during the measurement period were provided by the 10m anemometer, located near turbine T31 for the duration of Aercoustics measurements.

### 3.5 Turbine operational information

Output data from the turbine (Power, yaw, RPM, pitch angle, and nacelle wind speed) were obtained as analog output signals that were simultaneously acquired with the acoustic and anemometer measurement data using Aercoustics data acquisition system.

## 4 Measurement Results

### 4.1 Deviations from IEC-61400-11 Edition 2.1

The sound power level of the turbine was calculated using a binned analysis, as outlined in Section 8.3 of IEC-61400-11. An energy average of all data points was used as opposed to a linear regression. This is considered a more accurate representation of the turbine sound power level.

For wind bins where the overall signal to noise was between 3 to 6 dB the overall sound pressure level for Turbine ON (background adjusted) was calculated off the measured overall sound pressure level for background (not capped at 1.3 dB). This is considered a more accurate evaluation of turbine emission on the day of the test.

### 4.2 Special Notes & Considerations

There were no other turbines in the immediate vicinity of T31.

### 4.3 Analysis Details

The following section outlines analysis of the measurement data acquired for T31. The data presented is exclusive of transient events such as vehicle traffic, wildlife, air traffic etc. The site has been assessed to have a roughness length of 0.05m, representative of farmland with some vegetation.

#### 4.3.1 Double Windscreen Adjustment

As previously mentioned, no double wind screen was used, as such the measurement data did not require adjustment.

#### 4.3.2 Wind Speed Correction

Method 1: “determination of the wind speed from the electric output and power curve” (as per IEC 61400-11) was used to adjust the measured turbine power output (provided by GE Energy) to standardized wind speed data (10m above grade) for Turbine ON.

For data points between 5% and 95% of the rated power, Aercoustics applied a linear regression using the nacelle wind speed and corrected wind speed at hub height determined from electrical power output (for points beyond 95% of rated power).

Background wind speed was derived utilizing data acquired with the 10m anemometer.

4.4 Type B uncertainties

Type B uncertainties were obtained through interpretation of information provided in Annex D of IEC-61400-11. A summary of Type B uncertainties is provided in Table 9, while detailed information (including data in 1/3 octave) is provided in Appendix C.

Table 9 - Summary of Type B uncertainties

Component	Turbine ON Uncertainty (dB)	Background Uncertainty (dB)	Apparent Sound Power Level Uncertainty (dB)
Calibration	0.2	0.2	0.2
Instrument	0.2	0.2	0.2
Board	0.3	0.3	0.3
Distance	0.1	-	0.1
Impedance	0.1	0.1	0.1
Turbulence	0.4	-	0.4
Wind speed measured	0.9	0.9	0.9
Wind speed derived	0.2	-	0.2
Direction	0.3	-	0.3
Background	-	-	(Turbine ON – Background)

4.5 Sound Pressure Level Measurements

Sound pressure level measurements are summarized in Table 10. Detailed 1/3 Octave band spectrum data, respective uncertainties, and analysis plots are provided in Appendix C. A copy of the unprocessed measurement data used for analysis is provided in Appendix E and includes meteorological and turbine operational data.

As the purpose of this measurement was to verify turbine noise emission, testing was conducted in conformity with IEC 61400-11 section 5, paragraph 5 and a minimum of three integer wind speed values and 8m/s have been reported.

Table 10 - Summary of Sound Pressure Level Measurements

	6 m/s	7 m/s	8 m/s	9 m/s	10 m/s
<b>Turbine ON</b>					
$L_{eq}$ (dBA)	53.3	54.0	54.4	55.1	55.6
# of data points	7	16	8	16	7
Uncertainty (dB)	1.3	1.2	1.3	1.2	1.2
<b>Background</b>					
$L_{eq}$ (dBA)	39.7	38.4	41.8	46.1	48.6
# of data points	28	4	5	18	25
Uncertainty (dB)	2.5	2.4	2.6	1.4	2.0
<b>Resultant Levels</b>					
Signal to Noise (dB)	13.6	15.7	12.7	9.0	7.1
Turbine ON, Background adjusted $L_{eq}$ (dBA)	53.1	53.9	54.2	54.5	54.7

Values marked with \*denote background level was 3 to 6 dB below Turbine ON level  
 Values marked with \*\* denote background level was less than 3 dB below Turbine ON level and has not been reported (as per IEC 61400-11)

**4.6 Sound Power Level of Turbine**

The calculated sound power level of the turbine T31 (as per IEC 61400-11) is summarized in Table 11. Detailed analysis results are provided in Appendix C.

Table 11 -  $L_{WA 10m, K}$  at each integer wind speed

	6 m/s	7 m/s	8 m/s	9 m/s	10 m/s
Apparent LWA, (dBA)	101.7	102.6	102.9	103.2	103.3
Uncertainty (dB)	1.3	1.2	1.3	1.4	1.6

Values marked with \*denote background level was 3 to 6 dB below Turbine ON level  
 Values marked with \*\* denote background level was less than 3 dB below Turbine ON level and has not been reported (as per IEC 61400-11)

**4.7 Tonality Analysis**

The tonality analysis for Turbine T31 is summarized in Table 12, while plots of narrow band spectra at each wind speed are provided in Appendix D.

Table 12 - Tonality Assessment Summary

Wind Speed (m/s)	Frequency (Hz)	Tonality, $\Delta L_{in}$ (dB)	Tonal audibility, $\Delta L_a$ (dB)	FFT's with tones	Total # of FFT's	Presence (%)
6	136*	-3.3	-1.3	4	12	33%
7	630	-5.2	-2.7	8	12	67%
9	626	-5.1	-2.7	11	12	92%

\*Denotes masking noise is influenced by background

**5 Closure**

Measurements and analysis were carried on Turbine T31 of the Bluewater Wind Farm, located in the municipality of Bluewater as per International Standard IEC 61400-11 (Edition 2.0, released 2002 and amendment 1, released 2006-05) , “Wind turbine generator systems – Part 11: Acoustic noise measurement techniques”.

Should you have any questions or comments please do not hesitate to contact the authors of this report.
